

February 8-12

To Whom It May Concern:

Subject: Universal Fabricating & Greenhouses

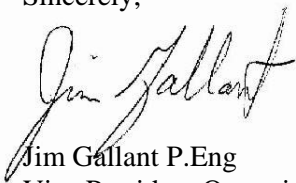

Dear Sir/Madam,

REMASCO owns and operates two 20tonne/day (2X400hp) waste pellet gasifiers in Kingsville Ontario. The REMASCO facility was built in 2008 and commenced commercial operation in February 2009. The gasifiers were designed by REMASCO and the design proven using a 75hp prototype unit built and tested in 2007-8. Throughout the prototyping process and the construction of the commercial facility, Universal Fabricating was REMASCO's sole mechanical contractor. Due to the fact that much of the work required of Universal was not able to be detailed and defined to an extent that permitted the award of a fixed price contract, REMASCO and Universal worked together on a cost plus basis. Normally, this type of arrangement could prove disastrous for a customer as it presents much opportunity for commercial abuse to be inflicted by the contractor. Notwithstanding this arrangement, Universal and all of its employees conducted themselves professionally and provided excellent value for every dollar of service provided. Not only were they conscientious and provided excellent workmanship, they contributed greatly in many areas of the equipment design. From project start to finish Universal never failed to diligently protect the interests of REMASCO and to this day Universal remains a key factor in REMASCO's success.

Please see the attached pictures, showing the Universal/REMASCO completed systems. More pictures can be viewed from our web site at www.remasco.ca.

Please feel free to call or email any questions or if you would like additional information

Sincerely,

Jim Gallant P.Eng
